

What this tool does?

Steps:

Step 1: Select the dasBlog content folder containing your *.dayfeedback XML files:

Please make a copy of the content folder, before you press process. This tool keeps no backups

Step 2: You selected C:\CONTENT\FILE\ folder.

Read Content

Press Read Content to identify the unique domains in all the trackback URLs.

Step 3: Select the domains from LEFT to RIGHT list that needs to be removed.

Unique domains in all trackback URLs

SPAM Domains to be removed

What this tool does?

With the growing Trackback SPAM problem it is better to switch off “Enable trackback service” in your dasBlog configuration.

What about existing SPAM entries that are already in your content folder?

It is very tedious to delete every SPAM URL manually. That’s where this open source tool helps you. You can point it to your dasBlog **content** folder, it will read all the *.dayfeedback files and display all the unique domains in the Trackback URLs. Then in one go you can clean up all the *.dayfeedback XML files.

Services Settings

- | | |
|--|---|
| <input checked="" type="checkbox"/> Enable Auto Pingback | <input type="checkbox"/> Enable Edit Web Service |
| <input type="checkbox"/> Enable Click-Through | <input type="checkbox"/> Enable Comment API |
